

# Initiative Savings Module (ISM)

**Greenstone's Initiative Savings Module (ISM) enables users to track, monitor and report consumption, carbon and financial savings against environmental initiatives implemented across their organisation.**

The ISM facilitates the monitoring and reporting of environmental initiatives across energy, water, waste and paper. Users can define targets, analyse how projects have contributed towards them and identify projects that could provide CO<sub>2</sub>e or consumption savings.

## Key functionality includes:

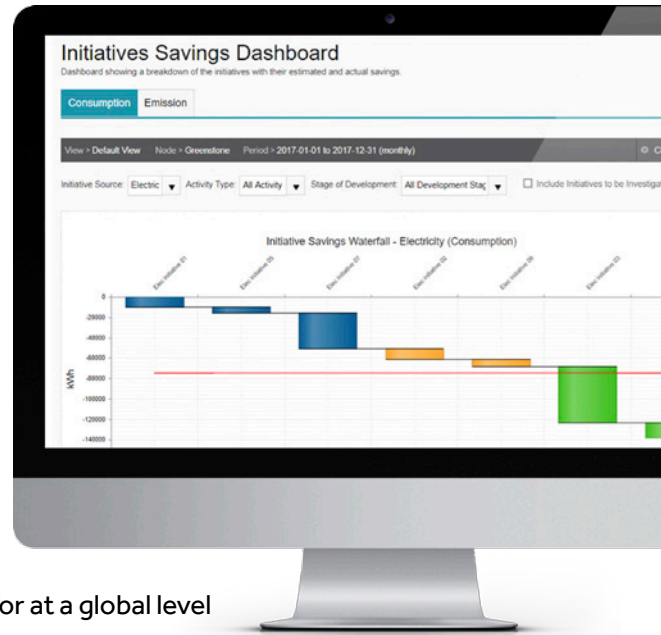

- Record and track initiatives against buildings, operating unit and/or at a global level
- Use existing operational data to set baselines and calculate estimated project savings
- Upload initiatives in bulk through spreadsheets or individually through online forms
- Identify delayed or proposed projects that could deliver on CO<sub>2</sub>e or consumption targets
- Carry out Monitoring and Verification (M&V) calculations
- Tag initiatives by environmental source, type and stage of development
- Normalise project savings for more context relevant comparisons
- Exportable project data aligns with CDP questions

## Key benefits:

- ✓ Enables granular analysis and reporting
- ✓ Provides greater transparency into how initiatives have contributed to targets
- ✓ Drives ownership of initiatives across a business
- ✓ Unlimited number of projects can be compared in one place
- ✓ Captures M&V calculations of achieved savings to compare against initial estimates
- ✓ Initiative status hub for all initiatives from planned to delivered
- ✓ Tracks performance of initiatives identified under energy audit reporting schemes

## CDP and the ISM

The data captured in the ISM is aligned with the latest CDP questionnaires to enable clients to collect and report the data required for the 'Targets and Initiatives' section of their submission. Greenstone is an accredited CDP software provider and this module adds to the suite of CDP content within Greenstone's platforms to enable streamlined reporting with CDP and other non-financial reporting frameworks.
